CAREER OBJECTIVE

Full Stack Developer intern candidate and IIT Madras BS Data Science student with hands-on experience building REST APIs, authentication, role-based access control, and database-driven CRUD web applications using Python, Flask, SQLAlchemy, and SQL (MySQL/SQLite). Practiced with HTML/CSS front-end development, Git-based version control, and debugging across the stack. Seeking the Full Stack Developer Intern role to contribute to frontend and backend development, and to grow skills in Python web frameworks and modern JavaScript frameworks under experienced mentorship.

EDUCATION

Indian Institute of Technology Madras (IITM)
Bachelor of Science – Data Science | Expected 2027

SND College of Engineering & Research Centre — Yeola, Maharashtra
Bachelor of Engineering – Information Technology | Expected 2028

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks

PROJECTS

CareerLink — Job & Internship Portal | Flask, SQLAlchemy, SQLite, Python, HTML/CSS, REST APIs, Git

- Full stack web application connecting **500+ students** with job and internship opportunities, with backend REST APIs powering the platform
- Implemented user authentication and **role-based access control (RBAC)** to separate student, recruiter, and admin permissions
- Designed backend architecture with full **database integration** for job postings, applications, and student profiles using SQLAlchemy ORM models
- Followed standard software development practices using **Git** for version control and iterative feature development

QuizMaster — Full Stack Backend Application | Flask, SQLAlchemy, SQLite, Python, HTML/CSS

- Developed backend services and **CRUD REST APIs** for quizzes, questions, and user management, supporting **100+ concurrent users**
- Implemented role-based authentication and **session management** with clean, maintainable backend code to keep quiz data secure
- Built search functionality and **real-time performance-tracking** features backed by SQL database queries
- Designed the underlying **database schema** to keep quiz, question, and user data consistent across the application

Uptime — AI-Powered Predictive Maintenance System | Python, LSTM, Machine Learning

- Led a **4-person team** to develop an AI-powered feature predicting machine failures using an **LSTM model**, achieving **85% prediction accuracy**
- Estimated Remaining Useful Life (RUL) and identified failure patterns in machine sensor data to support maintenance decision-making
- Designed a real-time monitoring concept, translating an ML model into a usable backend-facing system for engineers
- Awarded **1st Place** at SVIT HackVerse 2K26, a 36-hour hackathon, out of all participating teams

TECHNICAL SKILLS

Frontend: HTML, CSS
Backend: Python, Flask, REST API design & development, Authentication & RBAC
Databases: MySQL, SQLite, SQL, SQLAlchemy ORM
Tools & Practices: Git, GitHub, Debugging, Application Deployment, Agile/iterative development
Programming Languages: Python, Java, SQL
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Applied Machine Learning

CERTIFICATES / ACHIEVEMENTS

- **110+ DSA Problems Solved**: Solved Data Structures & Algorithms problems on LeetCode
- **HackerRank Certified**: SQL (Basic, Intermediate, Advanced), Java (Basic)
- **IIT Madras BS Milestones**: Completed Foundational Level and Advanced Certificate in Programming & Application Development
- **SND College Project Competition 2024**: Runner-Up; **TECHFUSION 2K25**: Winner, Micro Project Poster Presentation
- Participated in SUNHACKS-2K25 (International Hackathon) and SPARK 2K25 (National Level Project Competition)
